Principle 24: Disclosure of market data by trade repositories	Sections in Part 4 – Data Dissemination and Access to Data

3. Section 21 is deleted.

4. Section 24 is changed:

a) by replacing the text with the following:

Section 24 sets out requirements applicable to a recognized trade repository that outsources any of its material services or systems to a service provider. Material services and systems are services and systems that are necessary for a recognized trade repository to operate effectively and in compliance with regulatory requirements and appropriate standards. These may include, for example, a recognized trade repository's audit function. To promote a harmonized approach to the regulation of outsourcing, section 24 incorporates by reference the outsourcing requirements set out in section 21 of National Instrument 26-101 *Information Technology System Integrity*.

Generally, a recognized trade repository must establish policies and procedures to evaluate and approve these outsourcing arrangements. Such policies and procedures include assessing the suitability of potential service providers and the ability of the recognized trade repository to continue to comply with securities legislation in the event of bankruptcy, insolvency or the termination of business of the service provider. A recognized trade repository is also required to monitor the ongoing performance of a service provider to which it outsources a material service, system or facility. The requirements under section 24 apply regardless of whether the outsourcing arrangements are with a third-party service provider or affiliated entity of the recognized trade repository. A recognized trade repository that outsources its services or systems remains responsible for those services or systems and for compliance with securities legislation.

b) by adding a footnote after the words “audit function.”:

Critical services and systems, a subset of material systems and services, are separately regulated by National Instrument 26-101 *Information Technology System Integrity*.

5. These changes become effective on •.
